### **DETAILED ACTION**

1. Applicant's election without traverse of group I in Paper No. 5 is acknowledged. Accordingly, claims 4-20 have been withdrawn from consideration.

### ***Response to Arguments***

2. Applicant's arguments filed June 30, 2003 have been fully considered but they are not persuasive.

In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, Behrens teaches earth acid metal powder such as tantalum and niobium having high purity for use in the production of electrolytic capacitor having lower leakage as compare to metal powder of high impurity and Fife teaches that adding more than 500 ppm to 4,000 ppm nitrogen to niobium powder reduces the DC leakage in niobium anode. While Behrens prefers tantalum over niobium it does not teach away from the production and/or use of niobium having high purity in making capacitor anode. Since Behrens and Fife both concern about ways to improve the leakage of capacitor anode it would have been

Art Unit: 1742

obvious to combine the teaching of both references to produce or obtain metal powder having desired characteristic for making anode capacitor.

The declaration under 37 CFR 1.132 filed June 30, 2003 is insufficient to overcome the rejection of claims 1-3 based upon 35 USC 103(a) as set forth in the last Office action because: the showing for the amounts of Co and Si each not to exceed 100 ppm by weight in niobium powder in order to provide a desired electrolytic capacitor having a reduced leakage is insufficient facts to overcome the rejection.

The facts presented are not germane to the rejection at issue because it does not show that Behrens rare earth acid contains either Si or Co or these metals in the amounts exceed the amounts claimed by the applicant. Note that Behrens is silent about these metals and therefore one can believe that the rare earth acid produced by Behrens' method does not contain these metals.

In view of the foregoing, when all of the evidence is considered, the totality of the rebuttal evidence of nonobviousness fails to outweigh the evidence of obviousness.

### ***Conclusion***

3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the

Art Unit: 1742

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
